MANAGING YOUR WASTE

APS offers a comprehensive and cost effective waste recycling service to its commercial customers.

Our fleet of lorries are fitted with the latest communication and tracking equipment to ensure our central control office meets your exact recycling and waste disposal requirements.

Communication is a vital aspect of providing a professional and reliable service. Our control team can provide advice on all aspects of your waste collection and recycling, as part of your environmental management policy.

ECO-MANAGEMENT

APS provides high levels of service throughout our client base, from sole traders to blue chip companies.

APS is continuing to expand and our growth to-date has been sustained through 'word of mouth.' Our company is committed to recycling and this enables us to deliver

a service to you and the environment.

APS works closely with the Environment Agency and we are committed to ensuring that we maximize the recycling of waste that is processed at our Waste & Recycling Centre.

WASTE COLLECTION SERVICE

APS prides itself on service, our team are fully trained to advise as to the most suitable way to collect and dispose of your waste.

APS provides a fully comprehensive Skip Hire service to our clients. Our selection of skips in stock, ranging from 4-16 yards enables us to cater for all types of application.

If you require a skip to be placed on a public road our team will arrange the necessary permits on your behalf.

APS offers a Roll On/Off container service for those clients that have larger volumes of waste. We hold a selection of 20 to 40 yard containers to accommodate all types of materials.

WASTE RECYCLING CENTRE

APS operates a waste transfer & recycling centre with a fully operational weighbridge, so all waste is weighed before being processed. All waste materials are segregated on site through our integrated recycling system consisting of screening equipment, a picking station, air knives and magnets etc. Paper, plastics, cardboards, wood, plasterboard, ferrous and non ferrous materials are all recycled. All construction and demolition waste

e.g. soils, Inert & heavy materials are put through a trommel screener to separate the soil, concrete & brick. The brick is cleaned and offered as recycled hardcore, whilst the concrete material is crushed for re-use in construction and our soils are processed back into top soil. The remainder of waste is taken and disposed at a Registered Landfill Site. Please contact our sales team for details of our aggregates, sands and soil supplies.
